Subject: Exposure of Brake Maintenance Shop Workers to Brake Dust
(Reference: Letter R. L. Gealer, 4/14/75)

I will not address the question of the advisability of attending a collective industry meeting as suggested by Prof. Selikoff since I expect D. A. Jensen (Automotive Emissions Office) will respond to this. If such a meeting is to be attended, then I believe SRS should be represented. In such a case I would suggest that Roy Gealer attend for SRS, with Arne Anderson as the alternate.

While I am not in favor of an industry meeting with Prof. Selikoff, I feel that Ford should be informed of his findings. Therefore, I recommend that we invite him to SRS for discussions regarding the above subject, as well as for a presentation of his research progress under the Ford Research Grant for the 1974-75 period. Affected Ford activities should attend these discussions. Your list of names for comments to Roy's letter appears complete, except I would also include a representative from the appropriate Ford activity handling dealer recommended practices. C.E.O. might also be interested.

This letter also responds for A. E. Anderson and M. F. Valade whom you also asked for comments.
