With the July 10 publication of the new "inadvertent" PCB generation rule in the Federal Register, numerous requests are beginning to come into various functions within Monsanto for PCB specification on our products and also requesting certification that these products comply with the new PCB rule.

Even within Monsanto various functions have already started asking about PCB specs on raw materials we purchase, etc.

I suggest that the DEOs take up this subject at one of the regular DEO meetings and develop a uniform procedure and form letter to respond to such requests. For example, the manager of product acceptability for these products would be a logical focal point to handle and respond to such requests.

I would be happy to summarize and discuss this issue, including Monsanto action in progress regarding "inadvertent" PCBs.
