

INTER-OFFICE MEMO **TENNECO CHEMICALS, INC.**

TO	E. J. Schuetz	AT	Flemington	DATE	June 9, 1976
FROM	E. Schwartz	AT	Burlington	COPY TO	E. Schenke J. Sandstedt ✓ J. Jacobs J. Poarch
SUBJECT	CARBON ADSORPTION VCM EFFLUENT MONITORING				

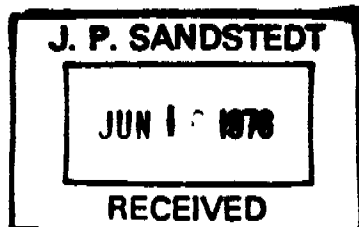

To provide for a separate 10 PPM max. range reading for the effluent from the carbon adsorption unit, an internal card change on the Bendix Gas Chromatograph will be required. This will allow independent alarm readings on a given point at 10 PPM. The present alarm lights will then show only excursions above 10 PPM.

The cost for this is estimated by Bendix to be \$300.00 plus the cost of a serviceman. Therefore, an approximate cost of \$1000.00 per point, used is anticipated. No cost for automatic switching of columns at action level of 10PPM or other functions is included.

If you should need any further information please contact me.
