Subject	Asbestos

EATON

As you probably know, industry in this country has recently been made more aware of the danger to health possibilities concerning asbestos.

This has now reached such a degree that we have had several customers asking questions related to Airflex friction lining material. The latest of these is from a sub-contractor to the British Steel Corporation, to whom we are currently supplying 10CB clutches, a copy of which is attached.

Would you let us have your comments therefore on this specifically and, more generally, a specification run-down on our lining constituents. At this stage, we do not propose to suggest that we are offering alternatives, but if we are 'put on the spot' is there anything you have to offer?

Incidentally, the material specification will be for our eyes only.

Kind regards,

Ron Stone

RHS/scs.
