December 17, 1984

Mr. R. Crackel
Industrial Commission of Ohio
Occupational Health & Safety
246 N. High St.
Columbus, OH 43215

Dear Mr. Crackel,

Please excuse our delay in sending you the results of prior industrial hygiene sampling carried out at our Newark, Ohio plant, especially with reference to our P-80 process.

Review of results taken on routine sampling twice a year over the previous four years indicates the following results taken at various locations along this line:

Phenol	<.1 to .18 ppm
Ammonia	1.9 to 3.0 ppm
Formaldehyde	<.1 to .47 ppm
Total dust	1.65 to 7.1 mg/M ³

Results are well within usual allowable limits, as shown by the above ranges of sampling.

If we can be of any further assistance to you or if you have any further questions,, please contact me.

Sincerely,

G. E. Devitt
Chief Industrial Hygienist
