

1 This occurred after an extensive discussion
2 with his family. It was, therefore, elected to
3 discharge the patient home on 5-1-90.

4 Q Now, when he was discharged from your care
5 on May 1st, 1990, did you prescribe any other
6 medications or any treatment for his care at that
7 time?

8 A The medications that he was discharged home
9 on were the stool softener Peri-Colace, the Lactulose
10 which was the medication used to provoke the bowel
11 movements, Lasix which was the fluid pill, MS Contin,
12 60 milligrams every 12 hours which is a longacting
13 oral morphine preparation and MSIR which is a short-
14 acting morphine preparation which can be used every
15 three to four hours.

16 Q Now, you said that when he was in the
17 hospital this time he had to be given oxygen.

18 Was he ever referred or recommended for any
19 home oxygen?

20 A Yes, he was. And that was provided to him
21 at home.
