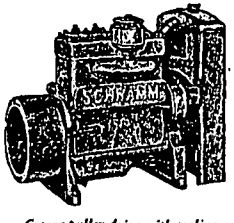
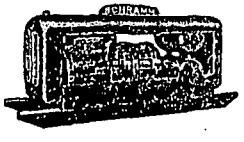
Schramm

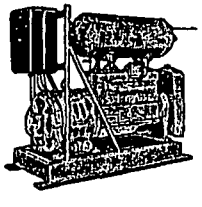
FOR AIR!



Crown pulley drive with cooling unit, leg support and foundation bolt holes, for drive by any prime mover.



"Built-in" motor drive on skid, complete metal housing with sliding removable doors and air tanks under hood.



"Built-in" motor drive complete with starter, cooling unit and overhead horizontal tank on steel base.

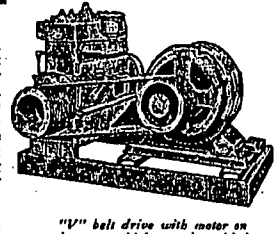
WHEN YOU SPECIFY SCHRAMM AIR COMPRESSORS you are selecting a unit designed and constructed to not only save considerable material; also weight, *but a compact compressor that is easy to* install, with no overhanging or projecting parts requiring lots of floor space and room space. This without sacrificing an ounce of pressure or, the hard hitting 24-hour continuous service so many plants require.

The perfect balance of the multiple cylinder construction eliminates costly foundations. Just place the compressor in a convenient location, on a substantial floor, connect power lines and operate. Other features include: lightweight reciprocating parts, thorough lubrication at all points of moving contact, complete jacketing of cylinders, heads and valves, positive automatic control that does not wear or jam.

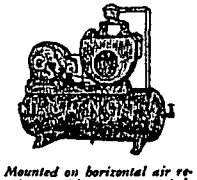
JOBS FOR WHICH YOU NEED A SCHRAMM COMPRESSOR

Air Chucks	Pipe Bending Machines
Air Hoists	Ramming Molds
Air Vises	Riveting
Blowing Out Cores	Sand Blasting
Breaking Concrete	Sand Rammers
Caulking	Scaling
Chipping Castings	Spraying Metal
Cleaning Boiler Flues & Machines	Spray Painting
Core Breaking	Squeeze and Jolting Machines
Drop Hammers	Steel Drilling
Grinding	Wire Brush
Nut Running	Wood Boring

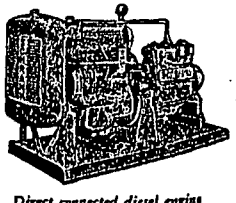
WRITE TODAY FOR FULL DETAILS



"V" belt drive with motor on base to which can be added starter, cooling unit and horizontal or vertical tank.



Mounted on horizontal air receiver, with pressure switch, pressure gauge, pop safety valve, air line valve and receiver drain, all installed and connected.



Direct connected diesel engine driven compressor for semi-portable or stationary installation on deck type base.

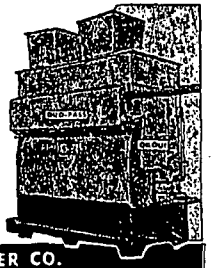
NIAGARA

AERO-PASS CONDENSER

with Duo-Pass, "Oilout" and Balanced Wet Bulb Control



Saves power; operates compressors at minimum head pressure with always full capacity; removes oil from refrigerant; saves condenser water; remains free from scale.

CONDENSERS

Surface and Barometric

Standard and Low Head Types of Dual Bank Surface Condensers with either Divided or Undivided Water Boxes; also the Patented, Reverse Flow Type, in which tubes and tube sheets are cleaned by a reverse in direction of waterflow, without *drop in operating efficiency. In the* Divided Water Box type, half of the condenser can be cleaned while the other half is in operation. Direct Contact Barometric and Low Level Jet Condensers. Catalog No. 1461 describes all types. Send for it today.

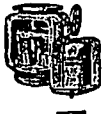
COCHRANE STEAM SPECIALTIES



MULTIPORT RELIEF VALVE. Because of its unique design, with a multiplicity of valve discs instead of one single disc, this valve insures safe, continuous operation without sticking, jamming or freezing. Publication 4150.

MULTIPORT DRAINER. For high capacities (up to 25,000 lbs. per hour). Provides tremendous discharge capacity by means of multiple ports in a rotating valve. Instantly responsive, compact, and light weight. Publication 4340.

LINE SEPARATOR. Insures clean, dry steam by unique design of baffles and ribs. Has exceptional port area, is self cleaning, one piece construction. Most widely used and most successful type of separator. Publication 2879.

C-D SYSTEM OF HIGH PRESSURE CONDENSATE RETURN. Drains condensate from process equipment at high temperature and high pressure in a closed circuit with no flash loss. Results in faster heat, more uniform heat, increased boiler capacity and extraordinary fuel savings. Publication 3250.
