JAMES M. CAIRNS, A. B., M. D., M. S., F.R.C.P.
LEWIS, MONTANA

Doctor Little, Roentenologist in this study, and myself, feel that a complete physical examination consisting of

1. History.
2. Physical Examination.
3. Tuberculin Test.
4. Further X-Ray Examinations.
5. Sputum Examinations.
6. Other special Diagnostic Tests.,

should be performed on all the above mentioned cases showing any intra-thoracic pathology.

I feel that we should have a conference on how best to proceed with the examinations. There will be a number of questions that should be explained before directing patients to consult their family physician.

Please feel free to call me if there are any questions, or explanations that we may be able to give in directing this study.

Yours very truly,

J.M. Cairns, M.D.
