U. S. Patent Office

Row Form, Belmont 754 - Spiral Form, Belmont 755 - Coil Form, Belmont 756

CONSTRUCTION . . . Long Fibre Asbestos Yarn, with a fine copper wire twisted with each strand of yarn. Braided square in the same manner as in braided flax packings. Each strand of metallic yarn is lubricated and graphited, resulting in a thoroughly lubricated finished packing, which avoids possibility of hardening in service.

APPLICATION . . . Reciprocating rods and plungers against high pressure steam, expansion joints, air, gas, oil, and header valves. Also used in combination with other styles where constant lubrication is desired such as Belmont 755 on page 37 and Belmont 756 on page 36.

See Pages 36 and 37 for Table of Approximate Box Weights and Contents of Standard Sizes of Spiral and Coil Forms
