REF: AACPP Statistical Reporting Format/Schedule
 Domestic Shipments, Nonpressure Sewer Pipe
 4-Inch thru 36-Inch Class 1500, 2400, 3300, 4000, 5000 and Up

Enclosed for immediate consideration by all reporting companies of AACPP is the recently approved statistical reporting format for domestic shipments of nonpressure sewer pipe. As previously agreed, the reporting forms, shipment map and reporting schedules have been color-coded green to distinguish them from comparable documents utilized for other statistical programs.

The quantity of forms sent to each committee member is shown by the number in parenthesis immediately after their name. Sufficient copies have been sent to allow reporting of all historical data plus monthly data for calendar year 1974. The allotment should be transmitted within short order to that individual who will be accountable for developing and systematically reporting the required data. For reference/file purposes an additional copy of the reporting documents has been attached hereto.

All reporting procedures and protocols now in effect for the reporting of pressure pipe shipment data are applicable to the nonpressure sewer pipe reporting program. In this regard, the non-domestic member companies should remember that even though no shipments of pipe are made to the United States, it is still necessary to file a report with AACPP to be eligible to receive the consolidated data.

Specific details as to what data are called for and when, are spelled out on the two reporting schedules. Originally, January 31, 1974, was to have been the target date for the submission of historical data (i.e. 1968 thru 1973 shipments). Due to the delay in initiating the program and based on the difficulties encountered in procuring historical pressure pipe data, it is now proposed that the deadline for submission of nonpressure sewer pipe historical data be March 15, 1974. Thus, approximately four months have been allotted to get the job done. More-

over, this new date coincides with the date on which the original submission of monthly data for 1974 is due. If everyone is diligent in complying with the March 15 date, the nonpressure sewer pipe reporting program will be on schedule from the outset.

If there are any questions, please do not hesitate to give either Mary Monfred or myself a call.
