Weekly report of Workmens Inspector of Mines
Week ended 17th Sept 1949

17th Inspected the surface plant at Wittenoon and
found it to be just as dusty as on any previous
visit. No improvement in the Change Room, it
was in a disgraceful state.

18th Sept 1949

Sunday attended a general meeting at Wittenoom several matters were discussed re the working of this mine

19th

Inspected the underground workings at Wittenoom and found things to be in a very bad state. The ventilation at this mine is getting worse than than any previous visit also carelessness in leaving fracture in the face not fired and requested that all misfires be fired immediately as leaving them would not be tolerated. Also requested that the ventilation be improved immediately. The Management promised to have drying racks placed in the Change Room on my last visit but this also has been neglected and requested them to be put in immediately to relieve the position temporarily. This Change Room is too small for the number of men using it.

(Signed)

S. Hunter

Workmens Inspector of Mines
