More EQUIPMENT NEWS

Begin on page 154

tor or adjacent metal components. Further details available from manufacturer. M W Kellogg Co. Chem Mfg Division, Jersey City 3, N. J.

Electric Motors

1210 • Redesigned line of totally-enclosed fan-cooled motors is available in ratings from 1/2 hp at 900 rpm to 20 hp at 3600 rpm in NEMA frame sizes 224 to 326 inclusive. Motors are available for vertical, wall or ceiling mounting and standard horizontal mounting. Descriptive brochure available on request. Lima Electric Motor Co., Dept 164, Lima, Ohio

For more data on these items, use post card p 167. Identify your request with item number.

Reclosing Relay

1236 • Automatic reclosing relay controls reclosing operation of circuit breaker, prevents repetitive tripping of protective relay. This feature is desirable where feeders are sectionalized by fuse operation since closed circuit breaker will then allow fuse to clear faulted feeder. Relay is available with adjustable integrating lock-out device that limits successive circuit breaker reclosures to a safe value. Further details from manufacturer. Westinghouse Electric Corp., Box 2099, Pittsburgh 30, Pa.

Vanaxial Blower

1241 • High-temperature vanaxial blower moves air at temperatures up to 350 F, and air containing acids, alkalis or fine abrasive dust without premature failure of belts and bearings. Addition of special dummy section containing guide vanes makes possible location of drive on negative pressure. (Continued on page 178)

SMART OPERATOR for Valves, Gates and Floorstands

CHAPMAN'S MOTOR UNIT

Instant control of valves and large sluice gates at the touch of a button... that's what you get with Chapman Motor Units on the job. Completely housed and thoroughly dust and weather proof, these units are built "to take it" for years, on the roughest service. They're designed for simplicity and extreme

ruggedness, as shown by internal view above.

Chapman Motor Operated Floorstands are delivered to the job with all internal wiring complete, so all the wiring to be done is to bring the power leads into the connection box... saving time and money in installation and assuring proper operation. Write for Catalog No. 50.
