

DR. ROUSH

Transcript, May 30, 1985:

"Q Did anybody ever tell you that Dr. Kaley at that point, right shortly after the spill occurred, within a month of the time the spill occurred, that he estimated that 90 percent of the TCDD in that tank car was 2,3,7,8-TCDD?

"A. No." (p. 172)

"Q. It is your belief, is it not, sir, that acute exposure to 2,3,7,8-TCDD will cause Chloracne and in the long-run basis, that Chloracne is the only adverse human health effect from exposure to 2,3,7,8-TCDD?

"A. Yes.

"Q. Now, you don't believe, do you, Dr. Roush, that the immune system can be adversely affected in the longer run, you don't believe that cancer can be caused by exposure to 2,3,7,8-TCDD in the long run, you don't believe that liver problems can be caused in the long run, you don't believe that porphyrin problems can be caused, you don't believe that any problems can be caused by 2,3,7,8-TCDD on the long-term basis, except Chloracne, isn't that correct?

"A. Based on my knowledge to date, yes." (p. 196)

"Q. That is also the position of Monsanto, isn't it?

"A. Yes, sir." (p. 197)
