NEW AO R-2000 RESPIRATOR

WITH THE CHEMICALLY TREATED FILTER

PROVIDES
* **40** TIMES
GREATER
EFFICIENCY!

Visualize dust as small as 24 millionths of an inch diameter which the R-2000 filters out and you will appreciate the impetus given to respiratory protection which this new respirator provides! Comfort combines with protection, too, because the compact, chemically treated felt filter is as efficient as previous filters 8 times its size — thus permitting the use of a smaller filter container for increased front and side vision and greater wearing ease.

*As compared with similar untreated filters.

Other advantages include no increase in low breathing resistance — disposability of the filter — gauge pre-filter for extended filter life by barring the passage of larger dust and dirt particles. Special lightweight face shield may be used with the R-2000 to protect eyes and upper face. The respirator has the approval of the Bureau of Mines.

AO has a complete line of respirators for protection against light concentrations of gases and vapors.
