Subject: TR: rencontre avec le Président de Chemours, Thermal Sustainability Solutions: Joe Martinko, member of Executive Committee

Bonjour

Je propose d'organiser cette rencontre lundi 18 septembre de 10h30 à 12h.

Voudrais-tu bien réserver une belle salle au premier (celles en façades avant ou celles du fond (désolé je ne connais pas leurs noms ...)) et inviter tous les collègues en copie de ce mail ?

Je vais répondre à Michaux mais ensuite tu enverras le mail avec les infos pratiques et le reste...

Grand merci !
Bat

Bonsoir

Thank you very much for your reply. Gerardo Familiar, Business President Fluoropolymers will be in Brussels on 18 & 19 Septembre. I understand that 18 afternoon is already busy for a meeting. But, please fee free to propose the slot that would be most convenient.

Bien cordialement,

MANAGING PARTNER

Monsieur ,

Thank you very much for your invitation to meet the management of Chemours and find out about its innovating projects. Unfortunately, we are unable to organize the proposed meeting with Mr Joe Martinko at the beginning of September. I apologize for this.

However, given the importance of these issues for us, we would like to schedule a meeting mid September during the visit to Europe of the business President of Fluoropolymers.

Would it be possible to suggest a few dates at that time? That way I can ensure that my colleagues responsible for fluorinated gases and PFAS can take part in the meeting.

Many thanks in advance.

With kind regards

gique/België

Monsieur ,

The EU Focus Group is the advisor of Chemours, a US based company with a site in Mechelen. Chemours is a world leader in terms of fluoropolymers and fluorinated gases (HFOs). Since more than a year, we are actively engaged in exchanges with decision makers across the EU and Belgium on the future F-gases Regulation and the PFAS Restriction but also Priority Substances Regulation (Water Framework Directive).

Chemours is proud to develop a sustainable & responsible approach in terms of production of fluorinated solutions. Reduction of emissions to the lowest possible level, is certainly an objective we wish to promote & attain. Fluoropolymers are essential to many products contributing to the Green Deal: membranes for generation of green hydrogen, semiconductors, electrification of mobility, etc. On the other hand, HFOs do have a very low warming potential and contribute to the fight against climate change.

We recently met Vice-President Sefkovic but also Commissioners Sinkevicius and Breton while meetings took also place at Minister's level in France, the Netherlands and others. In Belgium and given its presence in Mechelen, meetings also took place in the Flemish Region and others are planned to be requested at Federal level and Walloon Regional level.

Before the summer break, we had the pleasure to meet with Mr Auquier (in Cc). We are also looking forward to play a constructive role during the Belgian Presidency.

The new President of the Thermal Sustainability Solutions Business (Chemours is divided in 3 businesses: TSS- Titanium Dioxide and Fluoropolymers), Joe Martinko will be visiting Europe from the US, on the week of 5 September. A meeting is planned with Mr. Kurt Van Den Berghe, Director General DG Clima, some MEPs and a Ministerial exchange in Bucharest. In this respect, we would be extremely grateful if you would be available for a meeting, eventually on 4 or 5 September. Should these dates not be convenient, we would be pleased to organise the meeting at another time. The business President of Fluoropolymers will be visiting Europe mid September.

With Kind regards,

MANAGING PARTNER
