

USG-833

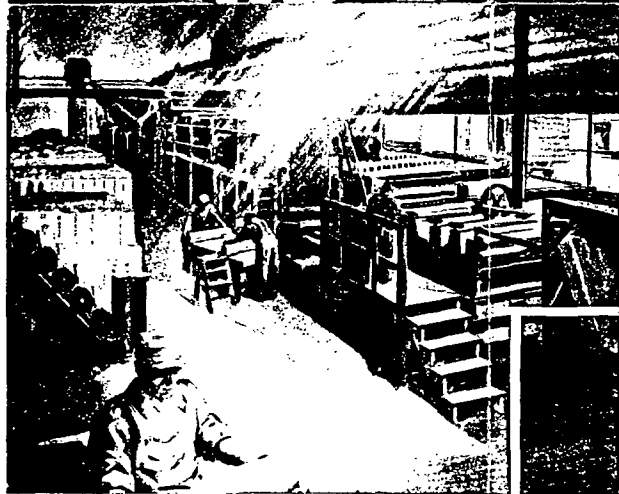

USG ASBESTOS FIBER COATING
Asphalt cut back with solvents and asbestos fiber added. Used for recoating old asphalt roofs that are pitting, checking and cracking from deterioration.

USG ASPHALT ROOF COATING
Asphalt cut back with solvents to a heavy liquid. Used for resurfacing old composition roofs, coating valleys that are in good repair, coating valleys, etc.

USG ASPHALT PRIMER
Asphalt cut back with solvents to a thin liquid. Used over porous surfaces such as concrete, gypsum, etc., to provide a priming coat for asphalt or cement.

USG PLASTIC ROOF CEMENT
A heavy-bodied asphaltic fibred plastic. Used for patching or pointing up old composition roofs; for resurfacing chimneys, parapet walls, etc.

U.S.G. ROOF CEMENTS AND COATINGS

**USG QUALITY CONTROL
EMPLOYED AT EVERY STAGE
OF THE MANUFACTURE OF
USG ROOFING PRODUCTS**

• Good roofing begins with good raw materials, and extends through careful storage, expert blending of asphalts and fabrication to careful and attractive packaging.

USG Asphalt Roofing is good roofing. Back of every foot manufactured is all the experience in laboratory and plant control gained by this Company through the manufacture of hundreds of different building products.

The USG line of asphalt roofing products includes shingles, roll roofing and accessories. All are manufactured to rigid USG quality specifications.

On the following pages are described four kinds of USG roll Roofings. While each serves a similar purpose, each is designed to give the user utmost quality for the purpose intended or within a price class. Each may be identified by the distinctive USG Roofing Label.

SELECT THE ROOF ROOFING YOU WANT

FROM THIS
MONTPELIER

U S G ADAMANT Top Grade Mineral Surfaced Roll Roofing. Used where a colored surface is desired in combination with the economy and convenience of roll roofing. Furnished in Gray Green, Slate Red, Blue-Black, Brilliant Green and Persian Red, and in Heather Bronze. Weighs ninety pounds to the roll. Approved by Underwriters' Laboratories as a fire protective roof covering. Made on heavy felt, which is thoroughly saturated with asphalt and then surfaced with weather resisting, colorful granules.

U S G ZEEN-X* Top Grade Corrugated Surfaced Roll Roofing. Especially adaptable for use on factories, warehouses, barns and other types of buildings where maximum durability and permanence in a roll roofing are required. Made on extra heavy felt into which is thoroughly impregnated a stout reinforcement and surfacing of asphalt. Made in four weights, seventy-five, sixty-five, fifty-five and forty-five pounds to the roll. Approved by Underwriters' Laboratories as a fire-protective roof covering.

U S G IMPERIAL* Smooth Surfaced roll roofing, finished with a mica surface in contrast with the talc used to finish U S G Zeen-x. Provides an especially attractive appearance. It comes in seventy-five, sixty-five, fifty-five, forty-five and thirty-five pound weights. Lower in price than Zeen-x, but a good quality roofing that provides many years of service when properly laid. Approved by Underwriters' Laboratories as a fire-protective roof covering on fifty-five, sixty-five, and seventy-five pound weights.

U S G DIXIE Made only in fifty-five, forty-five and thirty-five pound weights. Lower in cost than Imperial. Provides exceptional service on sheds, outbuildings and other structures where the cost of Imperial or Zeen-x is not justified. Felt of good grade and weight used for the base. Asphalt saturation is thorough. Labelled Dixie when shipped from our South Bend and St. Paul mills, and labelled PARACO when shipped from our mills at North Tonawanda, N. Y. and Jersey City, N. J. Quality is identical, however.
