MEMORANDUM

Tetra Ethyl Lead Plant
August 13, 1937

Mr. J. H. Schaefer:

In returning the attached correspondence, I have only one recommendation to make. That the method of cleaning all tetra ethyl lead tanks be under the supervision of someone from your department. I do not feel that just the issuance of plant safety instructions is sufficient to carry on such a hazardous job.

All Oil Companies should notify you when certain equipment is to be cleaned, and some authorized person from your organization should stand by during the entire cleaning operation. This, I feel would eliminate a lot of misunderstanding that exists between your organization and the Oil Companies.
