Knowledge of Preventive Measures

Date: 1945

*Source: Abstract of "Prevention of Pneumoconiosis" in Ceramic Abstracts
Compiled by the American Ceramic Society,
Vol. 24, No. 2*

Quote: "Pneumoconiosis is a group name for all **lung diseases caused by dust particles**; two forms of it are silicosis and **asbestosis**. **The best methods of prevention are** (1) **replacement of the substance** producing the obnoxious dust by a harmless one; (2) **prevention of the escape of dust** into the workshop atmosphere; (3) **the use of respirators by all workers** likely to be affected; and (4) **copious general ventilation**."
[emphasis added]
