Clear finishes provide real beauty and lasting protection for exterior painted or stained wood surfaces. Crystalline clear and transparent, remarkably resistant to weathering, these completely modern finishes highlight wood colors and protect the subtle grain patterns which make wood so appealing.

Clear finishes speed your work. They finish on with a minimum of effort and dry to a smooth, non-sticky film in just two hours--at least! Tough and durable, they retain their transparency and excellent weathering up, and are highly resistant to staining, chipping, scumming and the abuse of alcohol and alkaline materials.

Paint in two degrees of gloss: Clear Gloss Finish produces the rich, mid-sheen finish which is so popular for decorative exterior woodwork; Clear Gloss Finish is a sparkling, high-gloss finish recommended for all interior uses, including such "heavy wear" surfaces as bars, doors, furniture, desks, etc.

Does an excellent job of sealing new wood--including highly porous knots, surface blemishes and soft grain areas. The crystalline, transparent material penetrates the surface and binds the wood fibers tightly together to form a smooth, uniform foundation for that finish, varnish or stain. Clear & S and Clear Seal alone in one hour--can be recoated in half!

For exterior siding Clear Finish produces a sparkling, completely transparent film that actually lasts up to three times longer than ordinary finishes... effectively shields the wood from the destructive action rays of sunlight. Clear Finish Endures there and there as wood expands and contracts... resists mold and fungus growth... makes it easier to retain the appealing decorative colors of natural wood siding.
