

NOTICE TO MONSANTO-SPRINGFIELD EMPLOYEES

Monsanto-Springfield's Medical Department will be starting a special physical program for those who worked in the Resinox Manufacturing Department beginning with the early 1940's and into the 1950's. This surveillance program will be to insure that personnel who may have come in contact with an asbestos additive raw material are free from concern and continue in good health with regard to any possible exposure. Those specific persons who fall within the usage period will be contacted shortly.

This effort is part of Monsanto-Springfield's continuing program to help insure the health and safety of its employees.
