C. L. Sheckler - FINDERNE

University of California
Research - Coalinga Mine

During the week of April 8, Mr. Bowser was in Coalinga and set up several monitoring devices to collect three-day air samples in various points in the city.

He also contacted Jim Goodwin and requested that the sputum test kits be issued again to our employees, with the request that they submit them on a voluntary basis.

He advised that Dr. Connor's research team had received samples from 50% of our employees in the first go-around.

This information is forwarded for your reference in developing the bi-monthly health research report.

H. M. Jackson
