Subject: HAZARDOUS MATERIAL TRAINING

Date: December 19, 1985

Explanation:

The Federal government has recently passed legislation regarding the rights of workers to have information regarding the hazards of materials in the work place. Since the Denison plant uses several materials that fall under "hazardous materials" definition, we need to develop an employee training/information program.

Do you have any training programs available that can be used in our plant or tailored for use at Denison? If not, are there any such programs going to be developed by corporate headquarters group?

Has J-M established material safety data sheets (MSDS) to send to our customers? A/C, PVC etc? If there are such sheets can they be furnished to Denison? If not, when can we expect this to be done?

Prepared By: J. Lothman

Supervisor or Manager:	Department Manager: E. E. Wang I knew this message and will develope the program. Plant input are welcome. My memos will follow. EW 1-2-86
