depends on the degree with which you maintain high efficiency in your job. Slowing up of efficiency thru gradual development of poor health cuts off most successful careers. One must have good health to "get there." Physical and mental energies should be devoted to "hill climbing" in reach for success and never drawn on to replenish or repair dis-eased tissues within body.

Condition which leads to sickness or dis-ease lies in nerve pressure in spine. Chiropractor, by training and experience is thoroughly capable of correcting this nerve pressure, and you will then be blessed with perfect health.

You may not be restored to health immediately following removal of nerve pressure. It sometimes takes Nature weeks and months to rejuvenate wornout cells and tissues after an adjustment. Altho correction is taking place and damaged parts are being repaired, there may still be pain.

Nature works in man as she does in plants. If a plant is withering and dying from want of water, it does not immediately blossom forth in all its splendor following administration of water. Time is an important element in plant growing back to normal, as it is also important to body in process of getting back to normal.

One vertebra may be causing interference to several nerves. Maybe one nerve leads to kidneys another to stomach, still another to heart. From this situation patient may wonder how one adjustment could possibly help symptoms in different parts of body. Interference to normal flow of nerve impulses causes symptoms no matter where they are in body, and when vertebra is in proper position, 100 per cent nerve force will travel to all parts of body, and normal function will result.

Restoration of life into dis-eased organisms must come from within the individual. Cause of dis-ease is in body, and so is its cure. The chief thing the Chiropractor does is to remove interference that exists between brain cell and tissue cell, and health follows.

Let your Chiropractor tell you more about the greatest health system known to science.
