Re: "Chemical Reactions in the Atmosphere and Their Relationships to Weather Phenomena"

You may be interested in hearing that a paper on the above subject, which could be of significant interest to us, will be presented at next month's meeting at the Western New York Section of the American Chemical Society. The paper will be presented by Vincent J. Schaefer of the Atmospheric Sciences Research Center, State University of New York at Albany.

The meeting will be held on February 21, 1967 at the Continental Inn, Kenmore, New York. For those of you who wish to attend this meeting, there will be dutch treat cocktails at 6:30 p.m., dinner at 7:00 p.m., and the talk will begin at 8:00 p.m.

Mr. Schaefer is best known for his early cloud-seeding experiments. Some of you may be familiar with his recent article in Science Magazine in which it was noted that lead exhausted by automobiles, when exposed to a trace of iodine vapor, may be an important factor in changing the climate. In the paper to be presented next month, he will discuss the results of a survey made recently on a transcontinental flight. We have heard that he made measurements of lead in the atmosphere during that flight, and that these will be discussed at the meeting.

This notice is being sent for your information in case you would like to attend this meeting.

Very truly yours,

*James C. Romanas*
