here, and here and you can see a little bit of shoulder here. The major things that we are focusing on are the lungs and the heart and these few little white areas here which you see are blood vessels in the lung.

Q Now, Doctor, what is an area that is known as the costophrenic angle?

A The costophrenic angle is at the very bottom part of the lung where the lung interfaces with the diaphragm.

The diaphragm is the major muscle that we use to breathe. When we take a breath in, we have this thin muscle right here at the bottom of our chest that constricts and when it constricts, it expands the chest.

You can't really see it, but it is a very thin band right here that interfaces with the lung.

This angle that you see right here is the angle that interfaces the bottom part of the lung and the diaphragm, and below here is the abdominal contents, and the liver is sitting right here. So
