met which are excessively high, but generally counts for asbestos fibers have been within the five million particles per cubic foot of the ACGIH.

So what Dr. Selikoff is reporting here, and you and I talked about it earlier, an insulation worker is going to have time during the day that he is exposed to more than five million particles per cubic foot of air, but over an eight-hour working day his exposure is going to be within that five million particle per cubic foot TLV?

Is that what Dr. Selikoff is reporting in 1965?

A That is the essence, based on, again, what he points out, that very few measurements were actually made of those exposed.

Q Here we have somebody citing Fleischer-Drinker, right?

A The first one. I can't think of anybody.

Q Nobody took the time to write a letter to the editor or anything and publish it anywhere and disagree with the findings of Fleischer and Drinker;
