Subject: 1990 Aberdeen SARA 313 Emissions

Interoffice
Communication

VISTA

The attached table details emissions to the environment of SARA 313 listed chemicals during calendar year 1990.

VCM emissions continue to fall as residual VCM content in slurry continues to be reduced. Lead emissions were also reduced during 1990 but this reduction was most likely due to product mix and volume reduction compared to 1989.

If you need any additional information, please call me.
