BY MR. RUCKDESCHEL:

Q Doctor, I checked off on this asbestos, benzene, beryllium, dioxin, formaldehyde and glycol ethers for things that sort of fall into the pattern that we were discussing a minute ago. Are there other substances that fall into that pattern? And if so you can just give me the number and I'll click them off.

A It's possible silica may one day fit. I would say that's all.

MR. RUCKDESCHEL: Okay. Let's take that break now for counsel. And people on the phone, we need ten minutes.

THE VIDEOGRAPHER: This concludes Tape 2. Going off the record at 2:00.

(Discussion off the record.)

JUDGE KLINE: We're on the record. I had said that I had a chance to think about it during this deposition. The question is as I understand it was whether or not the witness knew of any study that showed the asbestos release when a brake pad box was opened.

And the witness said that there had been a preliminary study, actually done in his office by someone employed in his office, that it had not been determined if the study had a scientific basis, or whether the study had any validity, and therefore the
