

LEAD INDUSTRIES ASSOCIATION

88 EAST 42ND STREET

NEW YORK 17, N. Y.

April 15, 1960

To All Members of the Pigments Technical Committee
and the Chemical Subcommittee of the Lead Industries Association

Gentlemen:

Re Investigation of the Anticorrosive Properties of Lead
Pigments and Compounds in Water Reducible Ferrous
Metal Primers (LP-34-60)

First Steering Meeting at The Eagle-Picher Company,
Joplin, Missouri

As you know we have recently awarded the subject project to the Eagle-Picher Company to undertake the aforementioned research. You have all received copies of the proposal and in screening it had numerous comments to make. Since this project has just recently gotten under way, we believe it advisable to review with the Eagle-Picher Company the various critiques made of their proposed research so that the committee representatives and the contractor can reach agreement as to the proper direction of this research and the materials to be investigated. By this joint effort we feel that the contractor, the committee, and our industry and its associated industries can benefit most effectively.

The meeting will start promptly at 9:00 a.m. and it is recommended, therefore, that members arrive the night before. It is recommended that all committee members make their own reservations for travel and hotel. We believe that only one day will be necessary for this meeting.

Will all who plan to attend please notify Mr. E. Warner with a copy of your communication to me?

Very truly yours,

W. A. L. E.
