

Consistency

- Has the proposed effect been observed repeatedly under different circumstances?
- Mesothelioma has been repeatedly observed in persons exposed to chrysotile asbestos:

Chrysotile miners in Canada (Cartier 1952)	Textile workers in New Jersey (Borrow 1973)
Chrysotile miners in Italy (Piolatto 1990)	Friction product manufacturing in Connecticut (Teta 1983)
Chrysotile miners in Zimbabwe (Cullen and Baloyi 1991) (Baloyi 1989)	Friction product manufacturing in England (Newhouse & Sullivan 1989)
Asbestos cement workers in Louisiana (Hughes 1986)	Friction product manufacturing in Germany (Konetzke 1981)
