Mr. Donald Ferry
Charles Mathieu, Inc.
18-22 Bank Street
P.O. Box AM
Summit, New Jersey 07901

Dear Mr. Ferry:

Using x-ray diffraction and transmission electron microscopy with selected area electron diffraction, we have analyzed a sample of Monital 6040 talc designated as Lot #590300.

We found this talc to be completely free from asbestiform minerals both amphibole and serpentine. There were, however, a few talc shards in this sample but the bulk of the talc is predominantly platy.

If you should have any questions concerning this analysis, please contact me.

Sincerely,

Gene R. Grieger
Senior Research Physicist
