In response to your question concerning the asbestos warning imprinted on bags just received from Chase Bag Company, this is exactly how these were ordered.

As explained we amended our order from asbestos free to asbestos warning by letter on September 25, a copy of which was sent to Monty.

In a meeting at our Tigard Lab on October 22, it was reaffirmed that we wish to have these bags printed with the asbestos warning rather than asbestos free designation. If your plant is successful in marketing an asbestos free product, it will be necessary to apply an asbestos free label over the warning on each bag.
