

SOUTHERN MONTEREY COUNTY MEDICAL GROUP
(A Professional Corporation)
210 Canal Street
King City, CA 93930

Date: 3/30/82

Dear REDACTED:

We were happy to see you recently for your Union Carbide physical and to perform appropriate laboratory work.

Your physical exam was judged to be within normal range except

Breathing tests show some early obstructive lung disease. I am sure related to your smoking & continuing to smoke. As we discussed would be best to quit.

Your laboratory work, including blood test, urine, chest x-ray, EKG and pulmonary functions were normal except

See above

Your audiogram will be evaluated by Hearing Conservation Noise Control, INC.

ADVISE:

Hearing becoming progressively worse as we discussed

Thank you for your cooperation in this health maintenance program by Union Carbide.

Sincerely,

Betty W. Oetzel R. M.D.

John W. Hylleberg

OUTSIDE FILMS FROM E.P. MONAHAN, M.D., CRAIG COLORADO

10-3-57 and 5-20-63 - There has been no significant change in the films review and the present films. There still seems to be some generalized increase in pulmonary markings, as described in the report of 5-27-55.

DCM:LHA

REDACTED

X-RAY#16298

UNION CARBIDE

3-7-67 - PA CHEST - shows heart and great blood vessels normal in appearance. The diaphragms are normal position. Costophrenic angles are clear. There is calcific scarring in each perihilus and in the medial third of the right base. There is a mild linear thickening of broncho-vascular markings in the central and basilar portions of each lung fields diminishing at the periphery.

Comparison with outside examinations of 5-20-63 and 11-9-59 show no marked change since the 1963 exam, although there is a slight but definite increase in markings in the bases since the 1959 examination. A film dated 10-2-57 #3099 of E. P. Monoham, Craig Colorado, is also labeled R. Crow is not a film of Mr. West.

LHA:ACM

REDACTED

XRAY #16298

CLINIC #16139 C

3/25/68 - PA VIEW OF CHEST - Appears negative for evidence of a recent or active pulmonary lesion. The heart and aorta have not varied appreciably in size or contour since 3/7/67.

REDACTED

DFH:LLB

X RAY #16298

CLINIC #02K16139

3-13-69 - PA AND LEFT LATERAL EXAMINATIONS OF THE CHEST - show no essential change as compared with previous examination of 3-25-68. There has been no increase in lung basilar markings over the past four years.

JHN:ACM

REDACTED

X-RAY #16298

U.C.

Chart #16139-C

5-27-65 - PA OF CHEST - The transverse cardiac silhouette is 12.5; transverse measurement of the thorax is 28.5. There is a generalized increase in the pulmonary markings with fine, hard nodular densities suggesting pulmonary fibrosis. There are calcifications in the hilar areas. The heart is within normal limits as to size and shape. The costophrenic angles and apices are clear.

Conclusion: Essentially normal chest, except for changes suggestive of diffuse pulmonary fibrosis.

REDACTED

DCM:LHA

X-RAY #16298

Chart # (missing)

OUTSIDE FILMS OF 11-9-59 and 1-13-61 - The increased pulmonary markings, the hilar calcifications remain essentially unchanged from these previous films.

Interpretation remains the same.
