Mr. J. H. Coulter, Jr.

RE: DRAWINGS 131A7931 and 167A8474

Dear Mr. Coulter:

You will no doubt recall last October we called upon Messrs. Topland, McFarland and you regarding questions on the radius tolerance we could hold to on your drawings 131A7931 and 167A8474. A program to establish a practical figure was outlined in my letter of October 21st 1968 and I am now in a position to give you a report on what we have accomplished.

Attached you will find separate sheets covering the two drawings involved and we have indicated on them the proposed minimum and maximum tolerances we can hold on each of the radii shown on the drawings. At the time of our meeting it was agreed you would review these and advise the "A" dimension tolerances in line with our findings. It should be noted that when this is done the "B" dimension tolerances should also be changed to reflect those for the "A" dimension.

It was also agreed Mr. McFarland would check the advisability of eliminating the "A" dimension on the two end components and did not have any direct bearing on whether or not change of the proposed dimension tolerances would work or not.

During our visit we promised to mark the inside radius on all blocks shipped to you so you could check these to determine if there had been any change of tolerances during shipment. We have marked over 1000 of these blocks for you and are now interested in knowing what your investigation disclosed. At this stage we would also ask your permission to discontinue marking any

future shipments since it would seem we should both have a
sufficient historical record on the material.

You will note we have not included any drawings for drawings
1224702 since this is not such a fast matter and we have not
had an opportunity to develop the necessary information on
all sizes. Records will be kept on this part as orders are
placed with us and we shall let you know about this when we
have a story to tell.

When drawings 1224702 and 1224704 are revised we ask that
you send us two copies of each.

Very truly yours

R. J. Wiggins
