The three water samples and one sediment sample submitted January 27, 1971 have been analyzed for Aroclor 1254.

No.	Date 1971	Sample	Location	Aroclor 1254 ppb	Comments
1	1/27	Water	North Ditch	0.3	
2		Water	River H_2O Pump	0.4	
3		Water	Baffle Outfall	0.2	
4		Sediment	North Ditch	2.4	This sample was primarily sand.

After going through two complete clean-up procedures, a clear G.C. scan could not be obtained for the sediment sample. The PCB level, if any, reported for this sediment sample is only an approximation.

Gas chromatographic scans of these samples are attached. Also, included is a scan of a blank. This blank was obtained by working up a sample of deionized water in the same manner as a normal sample.
