St. Louis, Missouri

Dear Scott:

Enclosed are 21 milk samples from various sources which we would like to have analysed for PCB residues in your laboratory. The samples are milk from cows and humans and by our analyses represent a fairly wide range of PCB concentrations. The human milk samples also contain pesticide residue.

We have numbered these samples consecutively OARDC-101 through OARDC-121. Due to this fairly large number of samples, I have assigned the samples to the following three priorities.

Priority 1	Priority 2	Priority 3
101	102	103
106	104	105
116	108	107
117	111	109
119	112	110
120	115	113
121	118	114

Those samples in priority 3 probably should be held back and only run if we find that our results are not in agreement.

I certainly appreciate your willingness to provide us with these "cross-check" analyses.

Sincerely,

L. B. Willett
Assistant Professor
