J. H. Hinshaw - E2SB

I know quite a bit has transpired since it was first identified that some of the transformers at our Sand Mountain plant contained PCB's. I would like to get everyone together to discuss where we presently stand with the updating of the Company's PCB records, and secondly, the removal of unnecessary equipment. I would also like to discuss with the group our strategy for disclosure to the potential buyer and exactly how much the Company wants to disclose from an environmental point of view.

Conference room G437W has been reserved for Wednesday, August 6, 1986, at 10:00 a.m. Please check your calendars and advise my secretary, Wanda Schaefer, at 4-7538 as to your availability for this brief meeting. Thank you.
