Full Name	Allied Chemical Corporation Specialty Chemicals Div.	Interviewed
Address	2829 Glendale Avenue Toledo, OH 43614	Howard Nelson: Technical Manager Dave Montri: Purchasing Supervisor
Mfrs. of		Tom Rempe: Purchasing Agent (Corporate)

OBSERVATIONS

Visited promptly by Tom Rempe from their Morristown, NJ Corporate Headquarters whom I met in March. Discussion primarily on two subjects:

1. A replacement for ANTHOPHYLLITE asbestos (Powhattan 9B). Their lab work, and our knowledge of the differences between the two types of asbestos, pretty much rules out the possibility of replacing the material with any of our products. They are having no problem with supply, are satisfied with its performance, etc., but are interested in looking for a second source or a suitable replacment. I couldn't give them any info, so if anyone knows who sells Anthophyllite, please let me know.

2. Replacement for Canadian 7T asbestos. They are not desperate, but deeply concerned at this point. They would not reveal what the 7T is used for except that it is going into a resin of some type. Have enough material on hand to last them until the middle of next month at their current rate of production. The problem is that they expect a large order and will be about 25 m pounds short. They purchased 15,750 pounds of SG-210 in January, 1974 and suddenly realized that they still had about 12 m pounds on hand. They will run a fast evaluation to see if it can be used. Also left a sample of HPO which they will also test. Impressed on them our present supply situation and suggested they buy some RG-110 out of our Hammond warehouse if the 210 works. They requested it be held for them until they had completed their lab work but I turned them down. They understand the position we are in and I think they respect our efforts to supply our regular customers as best we can.

ACTION

I will phone Dave the first of the week to check on their lab work. Also send a RG-244 sample and Health and OSHA booklet to Howard Nelson.
