Hopeman Bros. (Wayne Manufacturing), along with others buy standard gardes in the same grades as PFR.

We have not been using our back stamping PFR symbol on the material, thus making identification impossible once the sheet is removed from the shipping container. This causes many problems in our customer's operation, especially when the possibility exists of laminating standard when it should be PFR.

Our customers would be benefited by marking the PFR and would make their in-plant handling much easier.

Would appreciate your advice.
