Subject: [REDACTED] [Sent on behalf of [REDACTED].[REDACTED]@health.fgov.be] FW: Call for Expressions of Interest for new WHO initiatives on PFAS and on pesticide metabolites

First and foremost my best wishes for the new year!

The following qualifications are required:

One or more of the following:

- Experience in scientific areas related to chemical safety; toxicology; exposure and risk assessments, preferably including for PFAS
- Experience with systematic reviews, evidence maps and/or evidence synthesis for complex chemical issues
- Familiarity with WHO's requirements for developing normative publications

In case you or anyone in your network might be interested in participating to this work this can be indicated by applying before **12/01/24**.

Via the following link you can find additional information: [Technical support to WHO's initiative to evaluate per- and polyfluoroalkyl substances \(PFAS\)](#)

Kind regards,

Health
Food Chain Safety
Environment

Call for Expressions of Interest to provide technical support to WHO's evaluation of per- and polyfluoroalkyl substances (PFAS)

The World Health Organization (WHO) is seeking expressions of interest from institutions or individual(s) to conduct a landscape review on the health effects and sources of exposure to per- and polyfluoroalkyl substances (PFAS) and develop a methodology for an in-depth assessment.

This work would enable WHO in the future, to undertake a more in-depth assessment of PFAS on the key health end-points of concern, with the view to establish health-based values.

Deadline for application: 12 January 2024

Call for Expressions of Interest to develop a methodology for assessing the relevance of pesticide metabolites in drinking-water

The World Health Organization (WHO) is seeking expressions of interest from institutions, companies or individual consultants for technical support to WHO's work on drinking-water safety and quality, specifically to provide technical inputs for a WHO initiative to assess the relevance of pesticide metabolites in drinking-water.

The risks to human health from pesticide metabolites in drinking-water have not been consistently identified by WHO Member States. While WHO has established an assessment scheme to evaluate pesticide metabolites in plants and animal tissues (WHO, 2015), no equivalent scheme has been developed for assessing pesticide metabolites in water. Establishment of such a framework would help Member States to more consistently assess such risks.

Deadline for application: 5 January 2024
