London E C 2, England

Many of the state departments of labor and federal agencies publish periodicals which are available upon request. With the exception of the state agencies, most of the others are mentioned under the subject headings in this section.

A number of trade journals have sections devoted to industrial safety. The safety engineer should become acquainted with those servicing the industry in which he is primarily interested.

Industrial accident prevention books

The "classic" and standard books of the safety movement are listed in the "References" section of Chapter 1, "Industrial Safety—Yesterday, Today, Tomorrow." Handbooks of engineering tables and formulas are listed in "References to Useful Handbooks" section of Chapter 47, "Safety Engineering Tables."
