SIMPLIFIED COLOR MIXING

It is now possible to match
the colors in the past not
only accurately but quickly.

When only one color is
all is added for, accurate
mixing is simply a matter
of adding to the standard
the color-mixing quotient in
the formula, a small amount
at a time, until the desired
color is obtained.

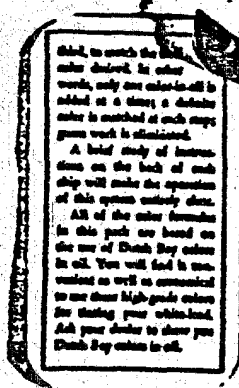

When two or three dif-
ferent materials are needed to
produce a color, the same
process provides a way to
check each step. The first
color-mixing is added until a
certain color is reached, then
the second, and another
color is added; then the
third.
