IN COMMODORE PERRY'S STRANGE CARGO

● When Commodore Matthew Perry sailed from China with the American fleet in 1853, his sea chest was laden with gifts of jade, gems, sacred buddhas, silks . . . and a bag of soy beans!

● For ages, the Orient has treasured this bean as a food. But not until 60 years after Commodore Perry officially introduced it to the western world, was its extraordinary character fully realized.

Aided by intensive Glidden research and experiment, the soy bean rapidly began to change the nation's agricultural and industrial habits!

● Today, the products of The Glidden Soy Bean Division are utilized in the

manufacture of bakery shortenings, bake goods, confectionery, cereal beverages, paper, animal foods, cosmetics, automobile parts and accessories, dietetic and packed foods, plastics, and many other products. To soy bean oil, Glidden Soyalastic Farm Paints owe much of their long-wearing, protective qualities.

● Long renowned for fine paints, varnishes and lacquers, The Glidden Company today embraces an impressive group of successful industries, utilizing great varieties of raw materials, to supply many different commodities for world markets.

THE GLIDDEN COMPANY • Cleveland, Ohio
