PROJECT TITLE

IBM PC For New Jersey Right To Know

PROPOSAL

Purchase an IBM PS 2/70 and Diagraph labeling software and printer in order to print labels required by the New Jersey Community Right-to-Know Labeling Law.

JUSTIFICATION The New Jersey Right-to-Know labeling law requires that all chemical containing containers and packages be labeled with the top five components. The items to be labelled include blenders, mixers, pipelines, valves, Q.C. sample bags, retained samples, and "consumer goods" such as cleaning supplies. Some finished goods such as compounds and resin must also be labeled.

The computer will be used to store the chemical constituents and "M-number" developed from suppliers' data and/or MSDS sheets. The product "M-number" will be used to print the in-process production labels. Each raw material change during a production run will require a new label for each "container" in the plant.

The majority of the chemical data is being provided by Corporate Environmental in Niagara Falls. The data generated by the plant will be provided to Niagara. This project has been reviewed with and agreed to by Niagara Corporate MIS.

The labels will be printed using the Diagraph Corporation label database software and printer.
