NOTICE TO ALL KELLY-MOORE & PACO PERSONNEL

It is mandatory that all employees loading pigment (dry powder) into dispersers, wear an approved respirator during the loading operation.

The approved respirator for dusts is the 3M No. 6983. This respirator has the NIOSH approval TC - 21C - 132. When not being worn the respirator should be kept in a dust free area. A clean plastic bag is suitable.

The respirator should be used in accordance with the manufacturers directions printed on the box in which they are supplied, and disposed of each day in the trash to avoid being accidentally reused.

In the event that you are working in an area with a large amount of solvent vapor you should obtain from your supervisor a Norton No. 7531 respirator which has the NIOSH approval TC - 23C - 75 and is recommended for organic vapors as well as paint lacquer and enamel mists. Again this repirator should be used and cared for in accordance with the manufacturers instructions which will be furnished to you in the box containing the respirator.
