PCB/PCT IN WASTE OILS

Memo L.R.S. to W.B.P. dated 5-8-72

Messrs.
J. H. Davidson - B2SF ✓
P. D. Fowlkes - W4A
G. G. Kosup - B2SL
W. R. Richard - T3A

Mr. L. R. Stark

At present no limits have been established by any governmental regulatory agency relating to the levels of PCB permitted in incinerator stack gases.

I believe that within a year any PCB release to the atmosphere exceeding 1 pound per day per location will be challenged. To maintain this low emmission level the amount of PCB in the waste oil must be in the low ppm levels depending on the amount incinerated per day.
