REFERENCE

TO : Doug Casey
Monsanto Newport

The attached procedure for high boilers in Aroclor 1016 is the proposed ASTM method described by E. Emery in his Telefax of 1/24/73. Good luck in using it.

Four Aroclor 1016 which we have analyzed by both the empirical short procedure and by the high resolution GC-MS procedure are being sent separately by air mail. The results of our analyses of these samples is also attached. Neither procedure shows much difference between these samples. We will anxiously await your results of these samples.
