TO D.F. Smith

The attached letter from Bob Johnson will probably require some extra analytical work but I am afraid we have no alternate. The information is probably required for pollution control programs.

Please forward the data directly to Bob Johnson.

I have advised Bob that Pydraul F-9 has been reformulated and replaced by Pydraul F-9A. I have sent him a data sheet on the new product and emphasized that it contains no P.C.B.'s. I have also pointed out the other benefits of the new Pydraul F-9A.

Since GM-St.Catharines still have some old Pydraul F-9 on use and in inventory, I believe that it would be well to supply them with the heavy metals content of both the old and the new formulae. Furthermore, as we are striving to get more business at this account with Pydraul 312, Pydraul 230 and/or Santosafe WG, maybe you should also include heavy metals data on these products.

Regards,

T.W. Oneson
