Subject: RE: Benzene study in China

Hi Carol -

Sorry you missed our meeting last week. Considering the nature of your question, you should contact Dr. Otto Wong, the PI for the epidemiology study. This case control study on AML and NHL will be evaluating benzene and (possibly identifying) other non-benzene chemical exposure associations with NHL.

I have copied both Drs. Wong and Irons on this reply, to provide you with their email addresses. I find email the easiest and most efficient way to contact our study PIs due to their very busy schedules and the time differences involved.

Trust this helps,
Lorraine

Subject: Benzene study in China

Lorraine,

I'm writing in regard to the benzene study in China that is getting underway. I work with Jim Collins in the epidemiology department at Dow. I was unable to attend your meeting in Detroit last week. However, I am very interested in the exposure assessment for agricultural chemicals for the NHL studies. I would like to talk with Richard Irons about this. Since Jim didn't have Richard's contact information, would you please provide me with his email and phone number?

Thanks! Best regards, Carol
