Re : Sub-cutaneous testing of silica coated lead chromate pigment sample
Ref.: 1. My letter of May 11, 1977
2. Your phone call of March 22, 1982

Dear Prof. Maltoni,

This is to let you know that we are still interested to pursue this program.

Due to other priorities I have not come back to you on this matter earlier. I apologize for any inconvenience this has caused you.

In case you still consider to publish your testing results, we would like to know from you which type of data you need from Du Pont concerning characterization of the tested samples described in reference letter.

Could you further give us more details on your findings, e.g. a draft of your planned publication or an abstract ?

With kind regards

JOS STAM
